## Evening Summary

Date/Time Stamp: Friday, September 04, 2015 - 8:05 PM

### Weather Summary

...Cooling & Moistening Trend This Weekend...

Moderate winds could linger across these areas into Saturday.

Otherwise, clouds and precipitation have moved into many northern areas along with much higher humidity levels. Widespread light to locally moderate precipitation has occurred across the mountains of ID. Precipitation will become steadier and more widespread across ID thru Saturday. Areas of Nrn NV and parts of UT will also see some scattered shower activity. Precipitation amounts in Central Idaho are expected to range from 0.35 to 0.75 inches during this prolonged stretch of cool, moist weather...with lesser amounts and spottier coverage further south. Snow levels in ID on Saturday could drop down to 6000 ft with several inches of accumulation.

Another weak disturbance late Sunday into Monday in the north could keep spotty shower activity going in ID...otherwise a gradual return to near normal temperature/humidity by the middle of next week, but no extreme heat or dryness is expected

### Preparedness Levels

Current:

Great Basin	4
National	5

**Great Basin Fire Activity: 7 fires for 868 acres**

**Large Fire Growth: 9,932 acres**

### Current Incident Details

Today's Activity (from WFDSS):

fires occurred overnight	Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. Of Origin Sage Grouse Habitat

***Notes of Significance***																		

### Resources:

- IMT 2 Wilcox & DeMasters available
- NV IMT 3 Wyatt will be mobilizing to Cougar Creek in WA
- Surplus of Equipment
- Starting to see significant demob from GB large fires

### Great Basin Fire Potential Summary

Overall fire danger has moderated and fuels should steadily moisten the next several days especially across Idaho and eastern Utah. However, the combination of strengthening winds and moderately low RH across much of Nevada and western Utah will BRIEFLY increase the large fire potential, at least while the winds are at their strongest during the afternoon/evening hours Friday.

For more detail, see [Great Basin 7-Day Fire Potential Outlook](#)
